

Introducing PremierDek 20

The new **Ace** in the **Steel Deck** market!

PremierDek 20 is the new low profile decking product suitable for concrete formwork projects from 10 square metres to 10,000 square metres!

Made from 1.0mm G550 Z350 Hi-tensile steel, **PremierDek 20** is manufactured in 250mm wide panels that overlap to form the required coverage area, and the 20mm high ribs make it ideal for thinner slabs. **PremierDek 20** is quick to install and the profiles lock firmly together to form a solid base that can include additional reinforcing. The panels are light-weight and custom made to length to suit any concrete project, with no onsite cutting or waste.

PremierDek 20 can be used as a stand-alone steel decking product for short spans and is also used as a base and Infill sheet for longer spans as part of the **Truedek® Steel Decking** system.

For more information about PremierDek 20 and Truedek® Steel Decking, please visit the Truedek website www.truedek.com.au or call Premier Steel Technologies on (02) 9756 0602.
